

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. **(Currently Amended)** A method of manufacturing an inkjet recording cast-coated paper wherein:
 a coating solution containing a pigment and a polyvinyl alcohol binder resin is supplied to a base paper,
 a treatment solution, which comprises a mixed solution of borate and boric acid having a blending ratio by weight of borate to boric acid of from 0.25/1 to 2/1 and having the function of solidifying the binder resin, is supplied to the coating layer while it is still wet in order to solidify the coating layer, and
 the wet, solidified coating layer is brought into pressure contact with the mirror surface of a heated drum and ~~fixed~~ dried to obtain a cast-coated layer,
 wherein a treatment solution supply roll is enclosed by the base paper ~~to bring such that the wet coating layer is brought~~ into contact with the treatment solution supply roll, and ponds of treatment solution are formed both before and after where the coating layer comes into contact with the treatment solution supply roll.

2. **(Previously presented)** The method of manufacturing the inkjet recording cast-coated paper according to Claim 1, wherein said treatment solution is supplied to the ponds from above the treatment solution supply roll so that it falls over the treatment solution supply roll.

3. **(Currently amended)** The method of manufacturing the inkjet recording cast-coated paper according to Claim 1, wherein said coating solution contains alumina as the pigment, ~~and polyvinyl alcohol as the binder resin.~~

4. – 5. (Canceled)

6. (Original) The method of manufacturing the inkjet recording cast-coated paper according to Claim 1, wherein said coating solution and/or treatment solution contains a release agent having a melting point of 90°C-150°C.
